FreeVIEW → introduce your lenses to updated AR self live streaming, video chat, and games. Free to try → webcam images and streaming video. View all windows Video Software is the way to come. From crazy cat videos on YouTube to in-depth learning to tutorial software sold by mega corporations, our society just can't get enough of those moving photos. But video is more than just an entertainment option or a revenue channel. It can also help you in your daily workflow and turn you into a performance machine at work! The eight video recording software mentioned below will help you communicate faster by increasing the amount of work you can do any day. Does that sound like something you might be interested in? Then keep reading. In this post we explain what video program we are talking about and the eight best options you should consider adding to your technology stack in 2020. Discover 8 of the best video-recording software options for 2020. The purpose of video recording SoftwareThe video recording software we will say in this blog is not the kind that you would like to use to record and edit a Hollywood blockbuster, or even a silly home movie. You won't find Adobe Premiere or Final Cut Pro on this list. We've put together eight of the best software tools that will allow you to record your personal computer screen in 2020. These kinds of programs can be extremely useful for business professionals and improve productivity and efficiency by giving users the ability to easily share everything they see on computer screens. The most common uses of video recording software to demonstrate tasks, troubleshooting problems, and craft intuitive tutorials. Top 8 Video Recording SoftwareThe following eight pieces of video recording software have been carefully selected. You'll find both paid and free tools, but each one is well designed and will be a worthy addition to your business software package in 2020. Let's dive in!1. CloudAppCloudApp is our favorite choice for video recording software. Let's start with our absolutely favorite video recording software, CloudApp. Are we biased? Of course, but after a brief look at the facts, we have no doubt that you will agree with us, thinking that CloudApp is a pretty awesome tool! CloudApp is an all-in-one, visual collaboration platform that gives users easy access to its voice recorder and webcam recordings, as well as the functions of the GIF manufacturer. After recording the content, CloudApp also allows its users to edit visual effects using a handy annotation tool to add drawings, arrows, and emoticons. What do you do when your content has been filmed and edited to perfection? Distribute it, of course! Our cloud-based software makes it easier to access your work through links that include password protection options, expiration date, and detailed analytics. Find out who's viewing your content quickly, and turn on the real-time notifications when your links are open. CloudApp packs a lot of features, but fortunately, all this functionality won't cost your business an arm and a leg. Plans including premium features start for as little as \$9 per month, although our entry-level plan is free forever and allows you to start sharing videos, GIFs and screenshots immediately. Become more productive and save up to 56 hours a week with CloudApp! 2. SnagitSnagit is a popular video recording software. Snagit is a popular video recording software that is specifically designed to help users make amazing turn-based instruction videos and how-to guides. If this will be your main goal when using this kind of tool, then you can find this app exactly what you are looking for. In a nutshell, Snagit gives you the ability to capture a computer screen video or using a webcam, video of yourself, and share the result with whoever you want. One of Snagit's most useful features is Favorites, which will allow you to add each of your favorite tools inside the app to one particular tab and group them together for easy access. It's a valuable, time-saving feature that will keep you from constantly digging into multiple menus to find what you need. Licensed This tool costs \$49.95 and can be installed on two different computers.3 ShareXShareX is a great free video recording software. When it comes to the best free video recording programs on the market, you'd be hard pressed to find a better tool than ShareX. This app makes it incredibly easy to capture your screen video with just one (customizable) click. One big feature included in ShareX is to record only part of the computer screen when needed. You may not want the entire screen to be visible in the video you plan to record and share. No problem, just select the area you want to record in ShareX and just capture that space in the video. After recording the video, users can edit it, although the editing features are not as extensive as the other apps on the list. But for a completely free tool, the functionality is impressive and perfect for those on a tight budget, or those who only need basic video recording features. 4. The debut of the CaptureDespite video from the interface, Debut Video Capture is a powerful tool. Debut Video Capture (DVC) is a powerful and free (personal-only) video recording software that can be used for a variety of purposes. For example, DVC can be used to capture video of a computer screen while working, which is great for explaining processes. But this app also allows you to record videos from external devices such as a high-quality VCR or a network IP camera (surveillance camera). This is a unique and useful feature for those who want to record higher quality videos than their webcam can provide, or those who need to set up a security system in their business location. Although the interface is unattractive and outdated, the functionality of this application is great, and the main reason why it secured a place on our list. It should be noted, however, that using this tool for non-personal related reasons will cost your company \$39.95.5. ScreenFlowScreenFlow is an excellent video recording software for Mac users. An Apple user? Then consider the use, ScreenFlow, intuitive, Mac-only video recording software. This app has many of the standard screen recording features we've talked about in this article already, such as creating a GIF and annotating images. But there are two things we particularly like about ScreenFlow: This app allows users to record screens of iOS devices. Want to demonstrate how to use a specific mobile app? Simply plug an iPhone or iPad into your computer, make sure your device is recognized, and tap the iOS Recording button. ScreenFlow gives its users access to the media library of more than half a million media clips that can be used in their own videos. This includes visual clips, background music and more. Just find what you need and drag it to the ScreenFlow Timeline. When the video is done, save time and export it directly to YouTube, Wistia, Facebook, DropBox, or Google Drive.Does ScreenFlow sound intriguing? You can buy the program for \$129. It should be noted that the media library additional cost and will work you \$60 a year. Premium support is also not included in the cost of the software, but can be for \$39 per year. 6. GoPlayGoPlay is a great video recording software for Windows users. We just gave you a Mac-only app, how about Windows video recording software next? GoPlay is a screen recording app that allows users to easily create high-definition clarity edit them into one mic and then export the final product to social media at the touch of a button. Some may find the picture in the picture (PIP) option particularly useful. This feature will allow you to record both the computer screen and yourself (via webcam) at the same time. Once you've created a video, the editing options include pruning, trimming, and various filters. Finally, you should mention the subtitle function. Add subtitles to each video so that the information you share is never lost or misinterpreted. GoPlay is mainly targeted at those who plan to publish their work on YouTube and other social media channels. But if you're using a Windows computer, there's no reason why this app can't also be used for more traditional business video projects. Prices start at \$4.90 per month. 7. CamtasiaCamtasia is an easy-to-use video recording software. Camtasia is known for being very easy to use. It combines screen recording features with more traditional video editing options (similar to the ScreenFlow and GoPlay apps that we mentioned earlier) to give its users a comprehensive set of video recording software. A typical workflow with this app might look like something like this: First, write down the screen. You can choose to capture it all or just part of it, anything that suits your video solutions needs best. Second, edit the footage. Cut sections; Combine multiple takes into one seamless shot; and add external videos, images and slides to the presentation as you see fit. Third, add effects and give your video a professional, polished feeling. Effects include annotations, titles, music and more. As you can see, working with Camtasia is a simple process. And while this app doesn't have as many screen recording features as other tools on this list, or edit options full of featured video editing software, it strikes a good middle ground between them. For those looking for basic screen recording features and slightly higher-end video editing options, Camtasia is a good bet and could be for \$249. 8. ScreencastifyScreencastify is a Google Chrome extension of video recording software. Finally, we have Screencastify, a unique option, because this tool is actually an extension of Google Chrome, not an independent app. It's perfect for those who use Chrome web browser and are looking for basic video recording software - especially if they are on a tight budget. Screencastify gives users several different options when recording. Do you want to grab an entire desktop, one particular browser tab, or yourself through a webcam? Each option is available. In the In fact, you can record your screen and yourself at the same time and insert webcam feed on the recording screen. The finished recordings can be edited with annotations and mouse highlights (so viewers always know what you're clicking on) and then trimmed and trimmed to perfection. When it comes to cheap video capture software, Screencastify is a solid option for just \$49 a year. Can't justify the price Use the app for free. Just know that you can only record up to 5 minutes of video. Right video recording software for you! You hope to become more productive in 2020, any of the video recording software mentioned in this blog will help you achieve that goal. Visual communication is on the rise and, in our humble opinion, is a worthy investment for almost every business. CloudApp is the best option when it comes to video recording software. With our tool's powerful screen and webcam, GIF creation and image annotation features, you can improve your performance immediately. Find out more about CloudApp here.
